

# Interactive & Effective

*'Regardless of diagnosis, the patients who have received InterX Therapy claim immediate alleviation of pain. Some have even reported analgesic effects up to 2 days post-treatment.'*

Gus Ntekos, MPT

Help us to add more patients to our list of success stories!

## INTERX<sup>®</sup> Therapy

Is available at the following locations:

Physiocare Rehabilitation, L.L.C  
205 White Horse Road  
Voorhees  
New Jersey. 08043

Physiocare Rehabilitation, L.L.C  
639 Stokes Road  
Medford  
New Jersey. 08055

A New Solution for  
Pain & Rehabilitation

## What is InterX Therapy?

InterX therapy is an advanced form of neurostimulation that is producing outstanding results with a wide range of acute and chronic conditions.

When integrated into physical therapy treatment plans, clinical observation has shown reduction in pain and inflammation, combined with significant improvements in range of motion and functional mobility for:

- Post-surgical applications, especially where functional improvement is slow or has reached a plateau
- Musculoskeletal complaints (e.g. back, neck, etc)
- Chronic over-use conditions such as tendonitis
- Osteoarthritis and other chronic degenerative conditions
- Sports and other acute injuries

## What to expect from treatment

InterX is a non-drug, non-invasive treatment that is comfortable and effective. The sensation from treatment will resemble a comfortable tingling or vibrating sensation. Typical treatment sessions will last from 10 - 30 minutes, depending on the complexity of the condition.

The effects of a single treatment are typically experienced within a few hours and can be sustained for up to two days or longer.

Generally a course of treatments is recommended over several weeks for optimal results.

## How does InterX Work?

InterX is able to achieve results where other modalities fail for a number of reasons:

1. **SCAN** - InterX uses a unique, interactive waveform that is sensitive to changes in the electrophysiology of the tissue. This impedance sensitivity enables InterX to be used to scan the skin of the patient and identify the precise points (Active Sites) that are neurologically connected to the site of pain or trauma.

2. **TARGET** - treatment is targeted very specifically to the identified Active Sites, which are often in a different location to the pain or trauma. This focused, high density stimulation of specific nerve endings produces a greater response from the body than conventional stimulation. The constantly changing waveform also avoids nerve accommodation.

3. **DYNAMIC** - InterX integrates perfectly with other physical therapy interventions. Its unique design enables stimulation to continue during the patient's engagement in therapeutic exercise and mobilization, a combination that enhances results.

## About Physiocare

Physiocare Rehabilitation is committed to providing exceptional preventative, rehabilitative and performance enhancing programs. We offer a selection of core services that include:

Physical Therapy  
Low Back Rehabilitation  
Work Injury Prevention and Management programs  
Sports Performance & Athletic Training Services

## Results that Matter...

Every patient is different and our wide range of modalities and treatment programs ensure that our patients have access to the best available treatment for their personal condition or injury.

**The dedicated therapists  
at PhysioCare look forward to treating  
your patients. If you have any questions  
or comments, please contact:**
